

OpenVibeDesk

Corporate Identity

Logo, color, typography and application

Developed from the supplied image reference.

An unmistakable shape.

The large stacked logo in the reference is the basis of every supplied variant.

Inward-positioned pupils

Detached triangle

Reconstruction

The symbol uses simplified Bézier geometry. The wordmark was vectorized from its outlines and smoothed.

Curves and colors approximate the raster reference. Shading and pixel noise were replaced with clear, solid fills.

01

Symbol

O, V and D retain their asymmetric shapes. The triangle is a separate color accent.

02

Wordmark

Write OpenVibeDesk as one word. The supplied path artwork preserves its shapes and letter spacing.

03

Authoritative master

Small variants in the reference differ. Every version in this system uses the same geometry.

One logo. Four applications.

Use the primary version on light surfaces; inverse and single-color versions suit other backgrounds.

01 STACKED LOGO / DEFAULT

02 INVERSE / DARK BACKGROUND

HORIZONTAL

Wide headers

WORDMARK

Compact signatures

MONO NAVY

Stamps and embossing

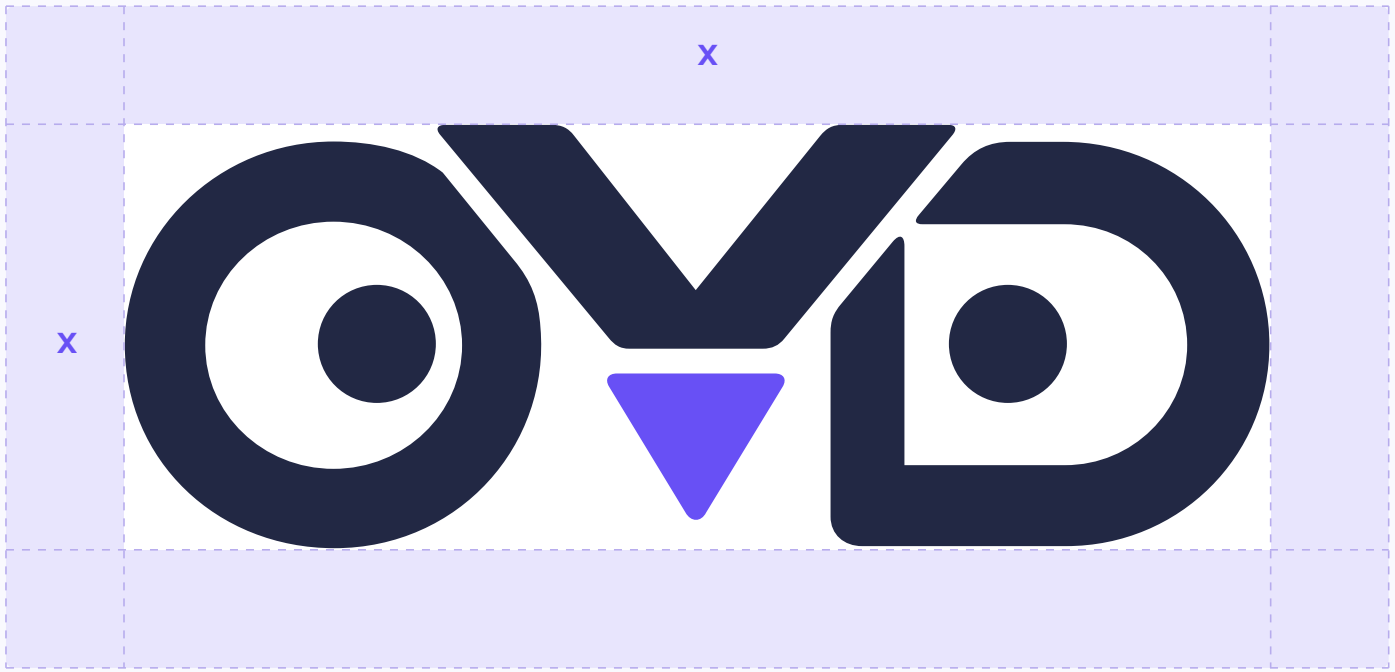

MONO WHITE

Violet surfaces

Use the symbol for small areas. A separate wordmark works well when the brand name is already the focus.

Clear space belongs to the logo.

Newly defined standard: x is the diameter of one pupil in the symbol at its current scale.

At least 1 x on every side

Keep text, edges and other artwork outside this area. For the stacked logo, apply x around the complete combination. Wordmark only: x = 8.52% of its width.

Minimum widths

	DIGITAL	PRINT
Symbol	**48 px**	12 mm
Stacked logo	**180 px**	45 mm
Horizontal	**240 px**	60 mm
Wordmark	**140 px**	35 mm

Sizes refer to visible artwork, excluding clear space. Print sizes are recommendations; check a physical proof.

App tiles: at least 64 px (the symbol inside is about 49 px). Smaller favicons need a separately optimized and reviewed version.

Navy creates calm. Violet adds emphasis.

Standardized sRGB colors derived from the reference. These values apply to the supplied SVGs.

Cards, inverse logos

Readable combinations

Navy on White

White on Violet

Light Violet on Navy

Text: Ink #12182D; secondary text: #606579. Inverse accent: #B8AAFF. These are complementary system colors.

Normal UI text needs at least 4.5 : 1. Violet on Lavender reaches only 4.21 : 1 and is not suitable. Correct logo colors alone do not establish application accessibility.

Print: derive CMYK with the target print profile; the bright screen color may reproduce differently.

Geometric, open, readable.

Manrope is the newly chosen system font. The original wordmark typeface cannot be reliably identified.

Manrope

Aa

Aa Bb Cc 0123456789

Regular 400 / Medium 500
Semibold 600 / Bold 700 / ExtraBold 800

Digital type scale

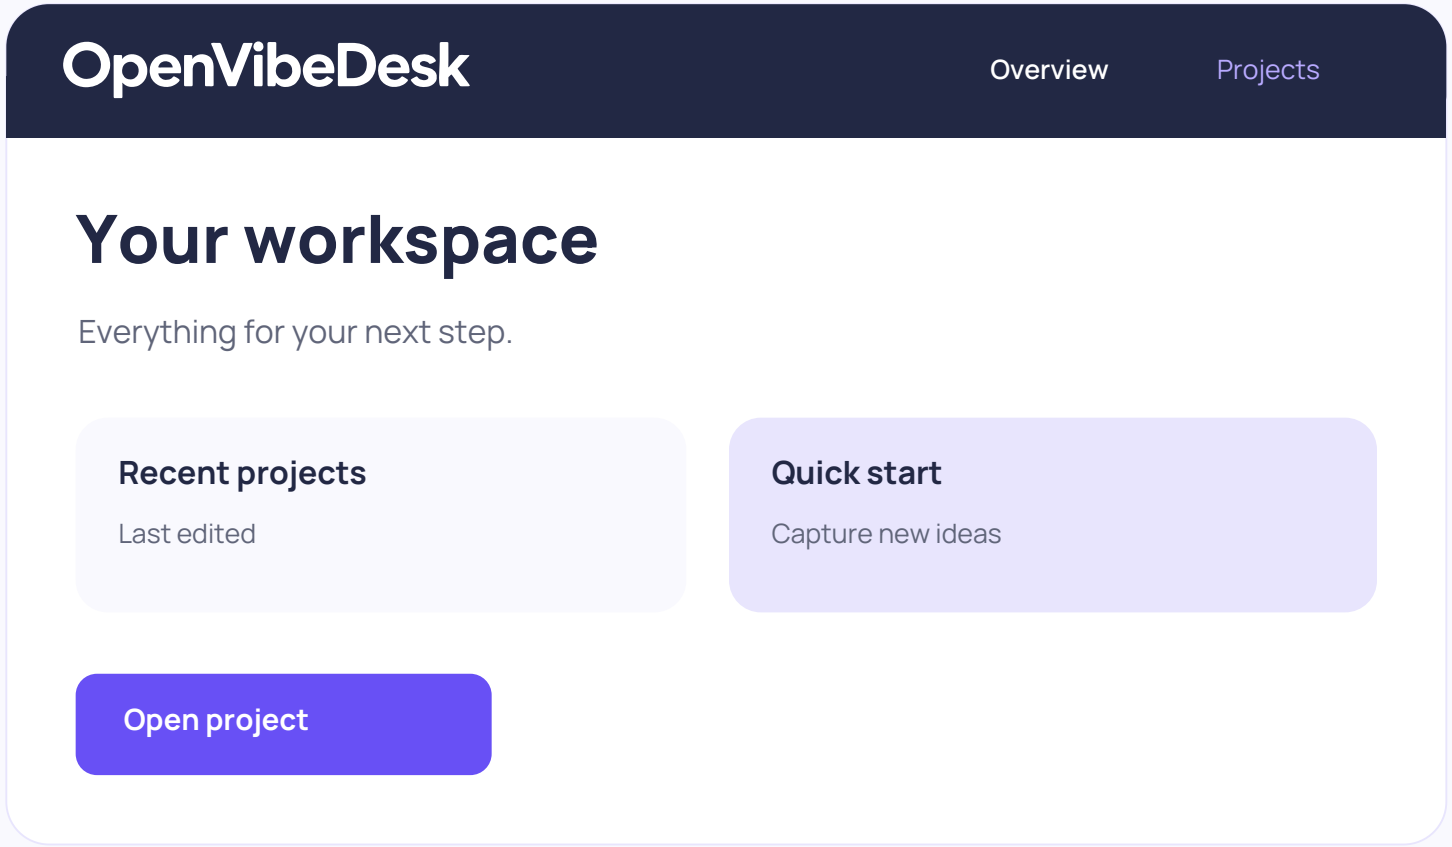

H1	**Clear ideas.**	40 / 48 px · 800
H2	**At a glance.**	28 / 36 px · 700
BODY	Write clearly and simply.	16 / 24 px · 400
LABEL	**Open project**	14 / 20 px · 600

Sizes are font size / line height. Left-align body text, with a quiet rhythm and adequate spacing.

Always use the SVG wordmark. For UI and documents, use the supplied Manrope version from Google Fonts (SIL Open Font License 1.1).

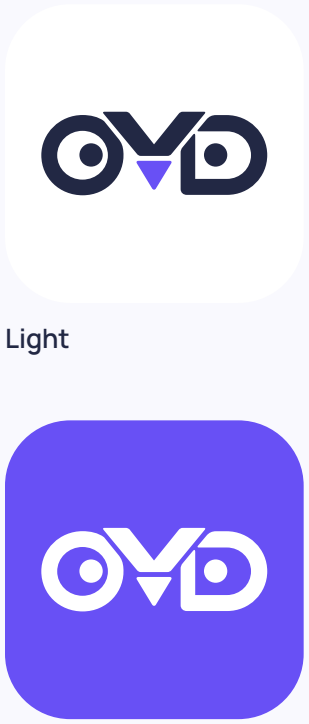

A quiet setting for the brand.

Recommended visual approach: generous surfaces, clear hierarchy and selective use of Violet.

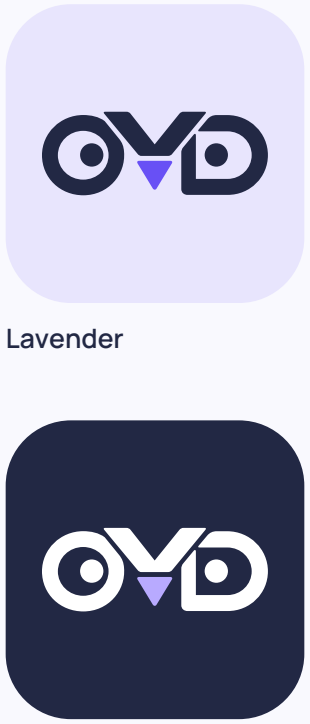

Example interface, not a functional specification.

App icons

4-pixel grid

Spacing: 4, 8, 12, 16, 24, 32, 48, 64 px.

Soft corners

Controls: 8 px. Cards: 16 px. App tiles: about 22%.

The logo needs no effects.

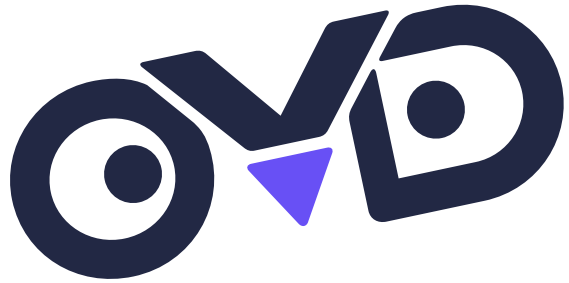

The supplied variants cover the intended uses. Start new applications from the master.

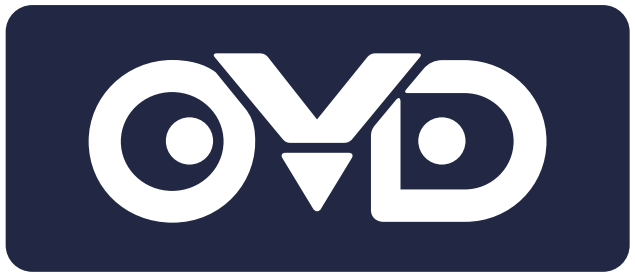

CORRECT — Keep proportions and space

AVOID — Compress or stretch

AVOID — Rotate

CORRECT — Use matching inverse art

AVOID — Substitute colors

AVOID — Add effects

Also avoid strokes, new logo gradients, changed letter spacing, replacement wordmarks and repositioned parts.

One master. Reproducible assets.

Every SVG contains real vector paths, without embedded images, external fonts or downloaded resources.

The package

assets/brand/

20 SVGs: stacked logos, horizontal combinations, wordmarks, symbols and app tiles.

assets/brand/source/

Editable geometry, color tokens, build scripts and pinned dependencies.

assets/brand/fonts/

Manrope variable TTF and its associated OFL license.

assets/brand/SHA256SUMS.txt

SVG checksums for verifying identical builds.

Rebuild the SVGs

Run from the repository root. Python 3.9 or later is sufficient; the SVG build uses only the standard library.

```
python3 assets/brand/source/build_assets.py \
  --out assets/brand
```

Path sources remain editable. Derive every variant from symbol.json and wordmark.json. Colors and sizing rules are in tokens.json.

For this guide: source/build_ci.py. Optional PDF dependencies are in source/requirements.txt; see reference/README.txt.

Provenance and status

Logo source: supplied PNG, 1536 x 1024 px. This is a vector reconstruction. Clear space, minimum sizes, the system font and UI rules are newly defined recommendations.
